## ...SOLVING YOUR THERMAL AND ACOUSTIC NEEDS

### *Open Ceiling Office Concept*

The dot-com world prefers large open office facilities that are non-confining, including ceiling design. The new century brought along with it the belief that drop ceilings simply smother an office space by lowering the height of a room, presenting the perception of being boxed in. Today's popular opinions are that archaic drop ceiling office spaces present out dated, institutionalized dungeons that smother creativity and growth.

Open high ceilings exposing ducts, pipes, cable trays and the ability to see from one end of an office to the other foster the team spirit while giving the sense of industrial production and the ability to expand, not only the office space but ones own personal limits.

One major consideration must be attended to for these facilities to be productive and comfortable. The ceiling must be light reflective, yet appear warm and comfortable while reducing ambient noise levels by absorbing all sound waves, especially in the voice frequency ranges. This is where the use of K-13 Sona Spray is ideal.

Made up of high quality non-toxic recycled cellulose fibers blended with a permanent and durable vinyl adhesive, Sona Spray will reduce noise levels by as much as 90% in all types of construction while maintaining the attractive design intended. When color matched to the surrounding environment, Sona Spray can be made virtually unnoticeable. K-13 products are a more cost effective and less obtrusive method to resolving special acoustic needs than other acoustic products.

Sona Spray provides a Class I fire rating and meets or exceeds all local code requirements. Retrotherm often provides a 10-year warranty on this product. Sona Spray provides passive acoustic control over the entire office space while highlighting the contrasting shapes and colors of the exposed building components.

Retrotherm often gets involved with specialized projects, providing cost effective and productive ceiling applications to help meet the accelerated scheduling demands associated with them.

Retrotherm has an outstanding record working with architects, owners, contractors, and other trades in these circumstances and we urge perspective clients to contact our many references.

#### **Project:**

*OnMoney.com  
287 Bowman Ave.  
Harrison, NY.*
