For years Villanova University tolerated the poor acoustic performance of their Sports/Event Arena. The continued complaints from coaching staff, professional entertainers, and fans led the facilities department to pursue a solution to this problem. K-13 Spray Applied Thermal /Acoustic treatment was chosen because of the superior acoustic properties and passive appearance.

Retrotherm was selected to manage and apply the K-13 because of their ability to perform extremely difficult and time sensitive projects. A 10 day time slot was provided to complete the project between planned events. Retrotherm completed the project in just 8 days! Retrotherm has been to Villanova twice since the completion of this project to address other acoustic problems within the University. Everyone affiliated with the facility is thrilled with the acoustic results and appearance of their NEW Arena.

Independent acoustic test results are available on request.

If you would like more information about how this product can help you in designing your next project, or any of the other acoustic or thermal treatments in our newsletters, please contact us at (800) 905-3730 or visit us on the web at www.Retrotherm.com. Retrotherm has successfully completed over 10 million square feet of K-13 systems and is considered one of the leading K-13 contracting firms in the Northeast. Call us, we can help.
