“Changing The Way You Look At Acoustics”

SonaKrete Is Here

SonaKrete is a brand new acoustic material created by International Cellulose Corporation to provide designers and owners with a TRUE acoustic plaster treatment that is more durable than any other acoustic treatment on the market today. The SonaKrete product is applied in thin layers up to 1/2 inch thick and floated out smooth to provide a tight, “Stucco” like appearance. Noise reduction of over 65% is easily achieved. The product does not collect dirt due to its smooth surface and can be painted. SonaKrete comes in any custom color desired and can be used in high abuse and high humidity atmospheres.

Retrotherm was chosen by ICC to be the first contractor in the United States to experiment with this innovative product, and with great results. We applied a custom “Tioga Blue” color to the sidewalls down to the chair rail level and white SonaKrete to the ceiling of this historic court room renovation. The results were outstanding. The courtroom has been beautifully restored and the acoustics are passively controlled. Contact us for more information and samples along with custom specifications so that you too may take advantage of SonaKrete.

Project: Tioga County Court House
118 Main St.
Wellsboro, PA

Description: Remodel Historic
Court Room
