THERMAL INSULATION • SOUND DAMPENING ACOUSTICS • CONDENSATION / NOISE CONTROL • STRUCTURAL FIREPROOFING

COMPANY BACKGROUND AND MISSION STATEMENT

Retrotherm was started in 1983 to provide responsible leadership and quality in the spray insulation industry. We quickly became a very competitive and desired company to complete all types of K-13 projects, from insulation to high profile acoustic treatment.

Retrotherm has completed over 30 million square feet of K-13 products and has become one of the top 10 installers in volume per year. K-13 is all we do and we know the product inside and out.

We have also developed a respected association with International Cellulose, the manufacturer, and have become the “go-to” people for new product testing, product research, troubleshooting, and experience in field applications.

We have never had a failure of K-13 on any project due to installation Or miscommunication with owners. We are by far the most experienced applicators of K-13 in the world and currently hold the world record production rate of installed K-13 per day.

We plan on keeping that record along with providing unsurpassed quality, support, and communication with every customer large or small. You can be assured of a flawless application with a minimum of inconvenience to other trades or employees. Please review our project profiles and let us know if you need more references.

Sincerely,

**Robert Chilcote
